SELF CRITIQUE

What did we do well?

Besides making a fully functional website, we used GitLab especially well: making full use of issues and version control.

What did we learn?

We learned a lot about React, Flask, SQLAlchemy, and MySQL.

What did we teach each other?

We taught each other a lot about relational databases and communicating across multiple programming languages.

SELF CRITIQUE 2

What can we do better?

We could have started each project earlier.

What effect did the peer reviews have?

The peer reviews helped us ensure everyone was on the same page and content with our methodology.

What puzzles us?

AWS hosting

OTHER CRITIQUE

What did they do well?

Their images seemed to be very relevant for each instance.

How effective was their RESTful API?

Extremely effective: it was very quick and well documented

How well did they implement your user stories?

They implemented all of our user stories in a timely manner exactly how we asked.

What did we learn from their website?

There are a plethora of free resources available for a variety of skills.

What can they do better?

There appeared to be some duplicate jobs.

What puzzles us about their website?

Filtering resources by "Free" seemed to include all resources.
